

Ticket ID	Alert Message	Severity	Details	Ticket status
A-2703	SERVER-MAIL Phishing attempt possible download of malware	Medium	The user may have opened a malicious email and opened attachments or clicked links.	Escalated ▾

Ticket comments
The security event must be escalated to a Level 2 SOC analyst. The email was determined to be a legitimate phishing incident as there are grammatical errors in the subject line and the body of the email. Furthermore, the file was determined to be malicious after inputting the file hash into VirusTotal. In conclusion, the alert severity was determined to be medium, and therefore, I choose to escalate this incident to a level 2 SOC analyst.

Additional information

Known malicious file hash:
